

The RCMP's M Division Wonder Squads

The Royal Canadian Mounted Police's M Division is tasked with all matters dealing with Wonders and Neutralium. Including, but not limited to:

1. Apprehending evil doing Wonders;
2. Guarding Wonder headquarters;
3. Guarding shipments of Neutralium, both the raw ore and processed goods;
4. Guarding the San Antonio mine in Bissett and the Neutralium product factory in Peguis.
5. Neutralium ore also enters the country from South Africa by way of Halifax from whence it is shipped to Bissett for processing. From there the refined Neutralium is normally shipped back to Durban.

Equipment

M Division is primarily equipped with non-lethal equipment, either gas guns and grenades or snare guns. All are laced with small amounts of Neutralium so as to disrupt a Wonder's powers. In the cases of more dangerous threats they are authorised to use deadly force especially when civilian lives are threatened. In those cases the brave marksmen of M Division will break out the big guns, literally.

The weapon of choice is the Heym Model 89B double rifle firing .500 Nitro Express tipped with Neutralium. This is capable of dropping an elephant or the largest rampaging Wonders in its tracks.

Rumours exist that M Division also has access to machine guns and light artillery. These are just that, rumours.
